

Project Development Phase

Platform Performance Test

Date	29 September 2026
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	

Model / Platform Performance Testing:

The uploaded example is Salesforce-specific, but this project is implemented in ServiceNow. To preserve the template's intent without misrepresenting the technology, the table below records the ServiceNow equivalent and marks Salesforce-specific measurements as not applicable.

S.No.	Parameter	Values	Screenshot / Evidence
1	Platform Summary	ServiceNow automation setup for metro ticket data management using Service Catalog, Flow Designer, custom table fields, request/RITM records, roles/ACLs, and portal components.	Use ServiceNow screenshots: catalog, flow, custom table, QR widget.
2	Accuracy	Salesforce Training Accuracy: N/A Salesforce Validation Accuracy: N/A ServiceNow equivalent validation: fare logic, variable mapping, workflow execution and ticket data were functionally tested.	Use fare / mapping / flow test evidence.
3	Confidence Score (Only YOLO Projects)	N/A - No YOLO/object-detection model is used. QR ticket generation is deterministic and does not produce ML confidence scores.	Not Applicable
