

Acceptance Testing

UAT Execution & Report Submission

Date	29 September 2026
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the User Acceptance Testing (UAT) coverage, defect status, and final test-case results for the Metro Ticket Generating System in ServiceNow at the point of release readiness. The report focuses on the passenger booking flow, fare logic, Flow Designer automation, data mapping, QR ticket rendering, request tracking, and role-based access.

2. Defect Analysis

During development and UAT, five notable issues were identified from the implemented workflow. All five were resolved before final sign-off. Severity levels below are normalized for this report as Severity 1 = High, Severity 2 = Medium, Severity 3 = Low, and Severity 4 = Informational.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	2	2	1	0	5
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	2	2	1	0	5

Bug ID	Issue	Severity	Resolution
BG-001	QR ticket did not render reliably in Service Portal due to portal sandbox/context limitations.	High	Fixed using Service Portal-compatible widget + spModal architecture.
BG-002	Fare mismatches occurred for some source/destination combinations.	High	Fare mapping/calculation logic debugged using logs and retested.
BG-003	Some catalog variables were missing or misaligned in the custom Metro Database table.	Medium	Variable-to-field bindings and dynamic population were corrected.
BG-004	Flow Designer executions showed failures or incorrect condition paths during configuration.	Medium	Execution Details were used to locate failed steps and validate the corrected flow.
BG-005	UI visibility / field population required portal-specific adjustment.	Low	UI Policies and essential Catalog Client Scripts were tested and refined.

3. Test Case Analysis

This section summarizes the executed UAT test cases by functional area. The final UAT set contained ten test cases, and all ten passed after the identified issues were corrected.

Section	Total Cases	Not Tested	Fail	Pass
Catalog Form & Input Validation	3	0	0	3
Fare & Workflow Processing	2	0	0	2
Data Mapping & Storage	1	0	0	1
QR Ticket & Portal Experience	1	0	0	1
Request Tracking	1	0	0	1
Security / Role Access	1	0	0	1
End-to-End Workflow	1	0	0	1
Totals	10	0	0	10

Test Case ID	Scenario	Expected Result	Final Result	Status
TC-001	Open metro booking catalog	Booking form opens with required variables	Form opened correctly.	Pass
TC-002	Submit valid journey booking	Fare calculated; request/RITM created; flow starts.	Completed successfully.	Pass
TC-003	Validate incomplete/invalid inputs	Invalid submission prevented or clearly handled	Validation behaved as configured.	Pass
TC-004	Validate fare calculation	Displayed/stored fare matches configured logic	Matched expected logic after fixes.	Pass
TC-005	Validate Flow Designer execution	Intended automation path completes.	Execution confirmed through Flow Designer details.	Pass
TC-006	Validate Metro Database mapping	Required catalog values map to correct custom-table fields.	Mapping verified after correction.	Pass
TC-007	Validate QR ticket display	QR/ticket renders reliably in Service Portal.	Rendered correctly using widget + onModel	Pass
TC-008	Validate request status tracking	Passenger can view current request status	Status visible to requester.	Pass
TC-009	Validate role / ACL access	Access restricted according to configured roles	Access behavior verified.	Pass
TC-010	Execute complete user journey	Booking -> processing -> storage -> QR -> station validation works end to end.	End-to-end walkthrough completed.	Pass

4. Release Readiness & Open Issues

No open defects from the documented UAT set remain unresolved. The current prototype is considered ready for demonstration / academic release of the implemented scope. Payment gateway/UPI integration, SMS or email ticket delivery, WhatsApp booking, and travel analytics are future enhancements and are not treated as UAT defects because they are outside the current implemented scope.

5. UAT Conclusion & Sign-off

UAT result: PASS. The implemented metro ticketing workflow satisfied the documented acceptance scenarios after correction of QR rendering, fare logic, variable mapping, flow execution, and portal UI issues.
